

STOCK MARKET JITTERS?

firstallied
Member FINRA/SIPC

It's no secret that dizzying stock market moves in recent weeks have been difficult to stomach. Think of all the events affecting the investment world:

- **Controversy in Washington over the debt ceiling.**
- **Standard & Poor's downgrade of America's prized credit rating.**
- **Renewed fears about European debt.**
- **Gut-wrenching plunges in the stock market.**

The uncertainty of everything has culminated in a wild ride. Come hear how we are interpreting available data, what leading economists have to say, and what strategies we are using to protect our clients.

The Standard & Poor's 500 (S&P 500) is an unmanaged group of securities considered to be representative of the stock market in general. Index is unmanaged, does not incur fees or expenses, and cannot be invested into directly. Returns do not include dividends. Graph is for illustration purposes only. Source: finance.yahoo.com
